

SEPTEMBER 2022

Is Prostate Cancer Awareness Month

Prostate cancer is a serious disease that affects nearly 13 out of every 100 American men. September is Prostate Cancer Awareness Month. As such, take the time to learn about the risks and symptoms of this deadly condition.

Ignoring prostate health can lead to even greater health complications. That's because age is the most common risk factor when it comes to prostate cancer. In other words, the older you are, the higher your chances of developing the disease. Beyond age, other risk factors include race and family history.

So, if you're a man over the age of 55, consider speaking with your doctor about your risk of developing prostate cancer. Be on the lookout for symptoms such as urination trouble, bloody urine, frequent urination or pain in the pelvis region that doesn't go away. Even younger men can consider looking into prostate exams, especially if they have a family history of cancer. The sooner prostate cancer is caught, the more treatable it is.
